HOW WE USE ENERGY IN OUR HOMES

Graph shows average kilowatt-hours used by selected appliances.

Multiply the appliance kWh times the cost of a kWh to figure out the monthly cost.

EXAMPLE

WATER HEATER

$$500 \text{ kWh} \times 0.0610 = \$30.50$$

* Continuous Use

** Energy to heat hot water not included

*** Cold water wash

**** 3 ¼ hrs/day

All costs are based on the current Inland Power residential rate of 6.1 ¢ per kilowatt hour.
